How to buy Abirakast (Abiraterone Acetat 250 mg)?

Abirakast is a drug from the Indian manufacturer Aprazer Healthcare containing abiraterone acetate, intended for the treatment of malignant tumors of the prostate gland. The medicine is used even in difficult cases, in the last stages of prostate cancer, in cases where other drugs or surgery have not yielded results. The pharmacy offers Abirakast at a low price.

Abirakast price (abiraterone acetate 250 mg)

Thanks to agreements with the generic manufacturer - the Aprazer Healthcare brand, the pharmacy offers the best price on the market without losing the quality of the drug, which allows you to start treatment immediately. Abirakast, containing 250 mg of abiraterone acetate in each capsule, is shipped to our warehouses directly from India to ensure the quality and safety of the drug.

Reviews for Abirakast (abiraterone acetate 250 mg)

Clinical studies of the active substance Abirakast - Abiraterona Acetat, have shown that the tablets successfully block testosterone production,

due to which the tumor shrinks and stops growing. The drug is a novelty, therefore it can be classified as a category with minor and insignificant side effects, in addition, patients who took Abirakast note a positive trend in the course of treatment.

Description of the drug Abirakast (abiraterone acetate 250 mg)

Abirakast tablets in the form of a white cone-shaped capsule contain 250 mg of the active substance abiraterone acetate, which acts on cancer cells, blocking their reproduction. The remains of the drug are excreted by the kidneys and intestines.

Indications and methods of using Abirakast

Abirakast is used as a component drug in the treatment of malignant neoplasms in the prostate gland. Oncologists usually prescribe a daily tablet containing a dose of abiraterone acetate between meals. Exceptions are debilitated patients, patients with problems in the liver, cardiovascular system, pancreas or musculoskeletal system. In each case, the dosage can be reduced.

Contraindications

Abirakast tablets are not used to treat women, children and adolescents due to their effect on the hormonal system of the body. Among the contraindications is also individual intolerance to abiraterone acetate or other components of the drug. In case of muscle weakness, heart problems or seizures, you must stop taking the drug and immediately contact your oncologist.
