Where to buy Alltera (lopinavir 200 mg, ritonavir 50 mg)?

An effective and inexpensive antiviral drug based on two components - Olter, is produced by the Indian branch of the American biopharmaceutical corporation Mylan. The drug has been successfully used for therapy against HIV, for the treatment of hepatitis B and for the fight against the 2019 mutation coronavirus. Before you can buy Alltera inexpensively in our online pharmacy, you need to consult a doctor.

Alltera Price (Lopinavir 200 mg, Ritonavir 50 mg)

In 2000, American and German scientists developed a drug based on two components - lopinavir and ritonavir, which showed excellent results in antiviral therapy for HIV and hepatitis B. The drug was named Kaletra and almost immediately entered the WHO list of essential drugs. However, the cost of the original drug is far from affordable for all patients, so the World Health Organization transferred the production license to reliable pharmaceutical companies from Asia. Mylan has received the right to manufacture a drug called Alltera. The cost of a generic drug is noticeably lower than the original, which makes it possible to treat patients with any level of income. The price in the pharmacy is influenced by direct agreements on supplies directly from India, from the manufacturer.

Reviews of the drug Alltera (lopinavir 200 mg, ritonavir 50 mg)

Based on the picture of clinical trials conducted during the launch of the original drug on the market, Oltera belongs to the class of new generation protease inhibitors. At the same time, the recently synthesized substance lopinavir is responsible for the destruction of protein and polyproteins in the viral cell, which prevents the virus from creating new cells and spreading, and the already known substance ritonavir helps to achieve and maintain the required level of concentration in the blood of lopinavir. Reviews of Alltera tablets confirm the effectiveness of the drug in a rapid decrease in viral load. In the treatment regimens for the coronavirus, Olter can be used to completely get rid of the disease.

Description of Alltera

Each package of Alltera contains 120 tablets containing 200 mg of lopinavir and 50 mg of ritonavir. The tablets are supplied in a plastic tube, which is placed in a branded box.

Application

Olter's tablets are used to treat viral infections such as HIV, hepatitis B and coronavirus. The daily dose of the drug assumes a single dose of two Alltera tablets, that is, at least 400 mg of lopinavir and 100 mg of ritonavir.

Contraindications

It is not recommended to take the medicine for those who cannot tolerate one or more of the components of the drug, persons under 3 years old, weighing less than 40 kilograms and with serious problems in the excretion system (kidneys and liver).
