Basic information about the drug Palbonix Description Palbonix Order, delivery and payment Palbonix

Where to buy Palbonix (palbociclib 125 mg)?

Palbonix, an analogue of Ibrance, is intended for the treatment of metastatic or locally advanced breast cancer. Palbonix is available for purchase at the pharmacy. Palbociclib contained in capsules is recommended for the fight against severe stages of cancer. The drug produced by Beacon Pharmaceuticals Limited is prescribed for adult patients, possibly for pregnant and lactating women. Before you buy an analogue of Ibrance - Palbonix on the website, consult with your oncologist.

Price for Palbonix (palbociclib 125mg)

Beacon Pharmaceuticals Limited, which is based in Bangladesh, received the right to manufacture a drug containing palbociclib - Palbonix from the World Health Organization in 2016. The original product - Ibrance, developed by the German pharmacologists of the Pfizer company, began to be used in 2015. The original went through all stages of clinical trials, which allows the Bangladeshi manufacturer to skip the research phase of production, as Palbonix is fully compliant with Ibrance's anti-cancer agent. This significantly affects the price of Palbonix, making it affordable for patients. The price at the Pharmacy is also influenced by the direct supply agreement with a Bangladeshi manufacturer.

Reviews of Palbonix (palbociclib 125 mg)

Studies of the original drug have shown that the active agent of the drug, palbociclib, has an inhibitory effect on the proteins of cancer cells, reducing their number and reducing the size of an existing tumor. In addition, Palbonix triggers anti-tumor immunity, enhancing the protective properties of the whole body. Thus, Palbonix acts on the cells of a malignant tumor, inhibiting and blocking the spread of the disease. Palbonix has been approved for use by oncologists in 85 countries since 2016.

Description of Palbonix (palbociclib 125mg)

Each pack of medicine contains a blister with 21 capsules. Palbonix hard, gelatin capsules contain 125 mg of palbociclib, which acts on the growth of cancer cells by blocking their proliferation. The drug is metabolized during the day and excreted by the kidneys and intestines.

Indications and methods of application

Palbonix tablets are used as a primary or additional agent in the treatment of breast cancer. The course provides for a single dose of the drug. According to the instructions, tablets with one dose of palbociclib are taken at the same time of day, shortly before meals or immediately after meals. The daily dose is equal to one tablet; in exceptional cases, the attending oncologist may revise the dosage of the medication.

Contraindications

The drug Palbonix is not recommended for use in case of individual intolerance to the components of the drug, during breastfeeding, for children under 18 years old, and the drug is not prescribed to mucinam.
