Where to buy Xapavir?

Xapavir is recognized as a quality analogue product. Many years ago, dolutegravir began to be produced under a brand called Tivikay. It is very important that if you are treated with such drugs, you can develop a lasting antiretroviral effect for yourself in a couple of weeks. Purchase Xapavir medication from our website. We can offer to use the services of purchasing the newest generics from us. Everyone who buys on our website does not worry about the quality of the product. Immediately after your appointment with the doctors and discussing the details of your therapy, you can buy Xapavir with our help.

Prices for the drug Xapavir

Xapavir is an analogue of a medicine called Tivikay. Once upon a time, Tivikai was thoroughly researched using advanced equipment and proved to be effective when interacting with organisms infected with HIV. Make sure that the cost of the Xapavir medicine is much lower than the cost of the original medicine by looking in our catalog. It is very profitable today to buy a generic drug that will help save money. Anyone who cannot be treated with the original prefers to order Xapavir.

Active substance Dolutegravir

The drugs based on dolutegravir act immediately. After all, the active substance can fight the human immunodeficiency virus type 1 or 2. Dolutegravir will remain active for several days after the patient has finished taking. The active substance can be treated in a complex, because it interacts well with others. Dolutegravir therapy causes different reactions: headache; nausea; vomiting and insomnia.

Description

Xapavir must be sold in its original box. Each of these boxes contains 30 tablets. The dosage of one is 50 mg of the active substance dolutegravir.

Indications Dolutegravir

Doctors who specialize in treating human immunodeficiency virus patients prescribe Xapavir to combat the effects of type 1 HIV infection. The drug can only be treated by adults or children who are 12 years of age or older. Not accepted if the patient does not carry 40 kilograms. About the nuances of admission, you need to check with your attending physicians.

Contraindications

The drug Xapavir is not taken if: there is a high sensitivity to the components of the drug; the patient is under 12 years old; the weight of the patients did not reach 40 kilos; patients have kidney problems. The drug is not taken with the substance dofetilide or with agents that change the effect of Xapavir on the patient's body.
